Business Administration

University of Pittsburgh

📅 2019 - August 2023

SKILLS

- SQL
- Looker
- Tableau
- Excel
- Stakeholder interrogation for BI
- Metric-definition policing

CERTIFICATIONS

- AWS

WORK EXPERIENCE

Business Intelligence Analyst

Wolf & Company PC

📅 January 2025 - current 📍 New York, NY

- Standardized KPI definitions for utilization, realization, and WIP aging, securing partner sign-off so teams stopped debating whose numbers were “right.”
- Built a profitability drill-down in Tableau that surfaced margin leakage by engagement type and informed repricing on 14 renewals.
- Audited data lineage with SQL tie-outs (source → model → dashboard), cutting refresh-related discrepancies from 9 per month to 2.
- Presented a monthly “insights-to-actions” brief that assigned owners and due dates, *reducing stalled follow-ups from 7 to 3* per quarter.

Junior Business Intelligence Analyst

Integra Partners

📅 January 2024 - December 2024 📍 New York, NY

- Converted vague requests into decision-focused dashboard specs (grain, filters, thresholds), reducing rebuild cycles from 3 rounds to 1.4 on average.
- Maintained a governed metrics layer in Looker, preventing duplicate fields and lowering stakeholder “definition” questions from 18 to 6 per month.
- Tracked adoption and usage patterns, lifting weekly active viewers from 46 to 79 by pruning low-value tiles and improving navigation.
- Partnered with Ops on exception reporting, *cutting manual investigation time from 2.2 hours to 47 minutes* per incident.

Business Intelligence Analyst Intern

Enkompas

📅 September 2023 - December 2024 📍 Pittsburgh, PA

- Cleaned and structured 6 raw exports in Excel into a repeatable dataset with validation checks, reducing refresh errors from 15 to 4 per cycle.
- Mapped source fields to business definitions and documented edge cases so handoffs didn't break when data owners changed.
- Built a weekly snapshot pack that highlighted top movement drivers and flagged anomalies before leadership review.
- Supported UAT by reproducing issues with exact filters and screenshots, *shortening fix confirmation from 3.6 days to 1.8 days*.
