WORK EXPERIENCE

Millenniumsoft – Business Systems Analyst

January 2025 - current

Remote

- Owned sprint delivery and backlog hygiene in Azure DevOps, keeping scope stable and improving story carryover from 28.7% to 12.9% across 6 sprints.
- Debugged API and integration issues in Postman, cutting median reproduction-to-fix time from 2.6 days to 1.1 days by sending engineers precise requests, payloads, and expected vs actual results.
- Applied Change-impact radar to flag downstream effects on roles, reports, and workflows before release, reducing post-launch escalations from 13 to 4 over 2 deployments.
- Coordinated UAT evidence and sign-offs across 4 teams, ***closing 19 defects pre-release*** and limiting week-one high-severity incidents to 2.

General Atomics – Junior Business Systems Analyst (BSA I)

May 2024 - December 2024

Fresno, CA

- Mapped current vs future workflows in Lucidchart, reducing clarification loops from 7 follow-ups to 2 per change request.
- Validated data outputs with SQL control totals and sampling, catching 9 mapping defects before they reached UAT and avoiding rework in downstream reports.
- Supported finance-facing process changes in SAP, reconciling postings and master-data impacts, which ***dropped month-end issues from 6 recurring tickets to 2.***
- Used Integration-triage communication to route incidents cleanly (data vs config vs permissions), cutting ticket back-and-forth from 5 messages to 2 and speeding resolution handoffs.

EDUCATION

Fresno State University – B.A., Business Administration

2020 - 2024

Fresno, CA

SKILLS

Azure DevOps; Lucidchart; SQL ; SAP; Postman; Change-impact radar; Integration-triage communication
