Bachelor of Science
Business Administration
Boston University

📅 2020 - 2024

📍 Boston, MA

SKILLS

- Salesforce Sales Cloud
- Microsoft SharePoint
- Salesforce Agile Accelerator
- Informatica Cloud
- JUnit
- Process-to-Salesforce mapping
- Release communication clarity

CERTIFICATIONS

- Salesforce Certified Advanced Administrator

WORK EXPERIENCE

Salesforce Business Analyst

United Airlines

📅 January 2026 - current 📍 Chicago, IL

- Optimized lead-to-opportunity intake and routing in Salesforce Sales Cloud, **cutting first-response time from 6.8 hours to 2.3 hours** for high-priority requests.
- Translated Sales/Service pain points into 34 user stories with edge-case acceptance criteria, reducing UAT returns from 16 to 7 in the next release.
- Aligned RevOps and field teams on one pipeline definition and stage-entry rules, eliminating weekly "pipeline mismatch" escalations from 11 to 3.
- Published release notes and training assets in Microsoft SharePoint, lowering post-release "how do I...?" tickets from 29 to 12 per rollout.

Associate Business Analyst

Deloitte

📅 2024 - December 2025 📍 Chicago, IL

- Tracked story progress and impediments in Salesforce Agile Accelerator, **improving sprint predictability from 68.9% to 82.6%** across 5 iterations.
- Documented process maps and decision logs that reduced stakeholder re-approval loops from 3.2 rounds to 1.7 per feature.
- Coordinated UAT readiness (test data, entry criteria, triage cadence), shortening defect validation from 3.9 days to 1.6 days.

PROJECTS

Process Automation Enhancement

Systems Analyst

📅 May 2023 - September 2023

- Designed an automated case-to-resolution workflow and wrote system rules for exceptions (reassignments, duplicates, priority overrides) to prevent manual rerouting.
- Mapped source-to-target fields and built an integration flow in Informatica Cloud, reducing sync failures from 14 per run to 4 during testing.
- Created unit tests in JUnit for validation logic and edge cases, raising pass rate from 76.4% to 93.2% before final demo.
- Presented a go-live plan with cutover checks and rollback steps, **keeping simulated downtime under 18 minutes** in the final run-through.
